

The Construction Industry Council
Yorkshire & Humber Presents:

CASELLA

Death by Technology Or the miracle cure?

National College for High Speed Rail, Doncaster

03/10/18

The construction industry appears to have mixed feelings about technological advances. On one hand it is at the forefront of these things, on the other hand, the industry has a reputation for looking at 'new' technologies with a fearful, cynical eye, always wondering whether the PI insurance covers the use of it, and who gets sued if it goes wrong.

But can traditional and technological approaches co-exist? Is it really a case of death by technology, or can technological advances provide the remedy that we need? Can we use past technology to inform how we move forward?

Maybe this industry is not suffering a painful death by technology, but rehabilitation. And instead of the two shying away from each other, we should be proud of our traditional heritage whilst shouting about the new. The two are not incompatible, sat in opposing tents, but rather huge sources of information that by working together, will continue to shape our built environment for the wider health of the industry.

Ian McMillan and Luke Carver Goss
Comperes and musical accompaniment.

Understanding the city's central nervous system: Mapping & digital urbanism
Can a knowledge of mapping, open data and smart infrastructure help us understand cities better?

Is the overdose of technology affecting our health or can it be our salvation?
What is the impact of technology on our health and what tools can we use to improve the health of the industry?

Rehabilitation: Can contemporary technology rejuvenate historic buildings?
Looking at how new and traditional technologies can benefit both historic and contemporary buildings.

(CT) scanning the city: How vulnerable is our built environment?
A greater understanding of PAS 1192-5 and how to implement it.

Healing rifts: Can technology provide us alternative ways to communicate?
Can we utilise technology to help us win work?

Yorkshire's life blood: How technology defined a region
A greater understanding of the impact of technology on the built environment and why housing needs to adapt.
